

BLUESTOCK

Mutual Fund Analytics

Comprehensive Capstone Project Report

Project Scope	AMFI 40-Scheme India Mutual Fund Industry
Data Period	January 2022 – August 2026
Schemes Analyzed	40 Equity, Debt & Hybrid AMC Schemes
NAV Observations	~46,000 daily NAV data points
Investor Transactions	32,778 anonymized records
Deliverables	Notebooks, Dashboard (4 pages), Reports, CLI Tool
Report Date	August 2026

1. Executive Summary

This capstone project delivers a complete end-to-end quantitative analytics solution for the Indian Mutual Fund industry, covering 40 AMFI-registered schemes across equity, debt, and hybrid categories. The project spans data ingestion and transformation, statistical risk modeling, fund performance ranking, investor behavior analytics, and interactive visual dashboard development.

Key Findings at a Glance:

Metric	Value	Context
Total Industry AUM	Rs. 63 Lakh Crore	As of latest reporting quarter
Monthly SIP Inflows	Rs. 31K Crore	All-time record MoM
Total Industry Folios	26.12 Crore	Retail + Institutional
Total Schemes Tracked	1,522	Across all AMCs in dataset
Highest Scoring Fund	Mirae Asset Large Cap (Score 85.1)	Composite 0-100 Scorecard
Highest Sharpe Ratio	ICICI Midcap Fund (1.09)	Rf = 6.5% annualized
SIP At-Risk Rate	97.8%	Avg gap > 35 days (6+ SIP investors)

2. Data Sources

The project integrates 10 distinct raw data sources ingested via an automated ETL pipeline into a centralized SQLite data warehouse named ``bluestock_mf.db``.

Table	Description	Rows
dim_fund	Scheme master: AMFI code, fund house, category, expense ratio	40
fact_nav	Daily NAV history per scheme (2022-2026)	~46,000
fact_performance	Pre-computed risk metrics per scheme	40
fact_aum	Quarterly AUM per AMC	~90
fact_monthly_sip	Monthly industry SIP inflow & account data	40
fact_industry_folio	Monthly total & category folio counts	40
fact_transactions	Investor transaction records (anonymized)	32,778
fact_benchmark_indices	Daily NIFTY 50 & NIFTY 100 index close values	~1,200
fact_category_inflows	Monthly net inflow by fund category	~480
fact_portfolio_holdings	Stock-level sector holdings per scheme	322

All data is sourced from AMFI public disclosures, NSE index archives, and synthetic investor behavior data generated for analytics purposes. NAV data was also supplemented via the live AMFI NAV API (``live_nav_fetch.py``).

3. ETL Design & Data Pipeline Architecture

The ETL pipeline follows a classic Extract-Transform-Load paradigm structured into three operational layers:

3.1 Extraction Layer

Raw CSV files are loaded from ``Data/Raw/`` and ``Data/Processed/``. The ``data_ingestion.py`` script handles all source reads with Pandas, enforcing explicit data types on ingestion to prevent silent type coercions.

3.2 Transformation & Quality Layer

- NAV time-series: forward-fill for weekends/holidays using ``ffill(limit=3)``.
- Expense ratios: validated within 0.1% to 2.5% bounds; outliers flagged.
- Transaction amounts: negative or zero values dropped.
- Date columns: parsed to ISO 8601 format with timezone normalization.
- Scheme names: normalized by stripping trailing whitespace and encoding artifacts.

3.3 Load Layer - Star Schema Warehouse

Cleaned data is loaded into a SQLite star-schema warehouse (``bluestock_mf.db``) with ``dim_fund`` as the central dimension table and all ``fact_*`` tables joined on ``amfi_code`` and ``date``. Indexes are created on join keys to optimize query performance.

3.4 Database Schema Overview

Table	Key Columns	Joins On
dim_fund	amfi_code, fund_house, category, sub_category, expense_ratio_pct	(Primary Key)
fact_nav	amfi_code, date, nav	amfi_code
fact_performance	amfi_code, cagr_1yr_pct, cagr_3yr_pct, sharpe_ratio, sortino_ratio, alpha, beta, max_drawdown_pct	amfi_code
fact_aum	date, fund_house, aum_lakh_crore, aum_crore, num_schemes	date
fact_monthly_sip	month, sip_inflow_crore, active_sip_accounts_crore	month
fact_industry_folio	month, total_folios_crore, equity_folios_crore	month
fact_transactions	investor_id, transaction_date, amfi_code, transaction_type, amfi_code_inr, state, city_tier, age_group	amfi_code
fact_benchmark_indices	date, index_name, close_value	date
fact_category_inflows	month, category, net_inflow_crore	month
fact_portfolio_holdings	amfi_code, stock_name, sector, weight_pct	amfi_code

3.5 Master Execution Pipeline (``run_pipeline.py``)

A single master orchestrator script (``run_pipeline.py``) sequentially executes all pipeline stages: data ingestion, NAV quality checks, performance analytics computation, advanced risk modeling, and visual

dashboard generation. This enables one-command full project reproducibility.

4. Exploratory Data Analysis Findings

4.1 Industry AUM Trend

Total industry AUM grew from approximately Rs. 38 Lakh Crore in January 2022 to Rs. 63 Lakh Crore by mid-2026, representing a compounded annual growth rate of approximately 18.5%. SBI Mutual Fund, ICICI Prudential, and HDFC Mutual Fund together account for over 43% of total AUM.

4.2 SIP Inflow Trajectory

Monthly SIP inflows grew from Rs. 11,500 Crore in January 2022 to Rs. 31K Crore by the latest reporting month. Active SIP accounts exceeded 7.2 Crore. The positive correlation between SIP inflows and NIFTY 50 performance is visible in the dual-axis chart on Dashboard Page 4.

4.3 Investor Demographic Analysis

Segment	Observation
Top States	Maharashtra, Karnataka, Gujarat (by transaction volume)
Primary Age Group	25-44 years (62% of all SIP transactions)
City Tier Split	Tier-1: 59%, Tier-2: 28%, Tier-3: 13%
Transaction Type Split	SIP: 52%, Lumpsum: 35%, Redemption: 13%
Cohort 2024 AUM	Rs. 349.11 Crore deployed across all products
Cohort 2025 Avg SIP	Rs. 13,505 per transaction (vs Rs. 10,996 in 2024)

4.4 Portfolio Holdings & Sector Concentration (HHI)

The Herfindahl-Hirschman Index ($HHI = \sum(\text{weight}_i^2)$) was computed per scheme across sector holdings. A higher HHI indicates concentrated sector exposure. Small Cap and Mid Cap schemes show significantly higher HHI ($>2,200$) due to heavy weighting in Financial Services and Industrials. Large Cap and Index schemes maintain balanced HHI near 1,800.

4.5 NAV Return Distribution Analysis

Daily return distributions were validated for statistical reasonableness. Equity funds exhibited mean daily returns between 0.06% and 0.11%, with annualized standard deviations ranging from 9% (Large Cap) to 22% (Small Cap). Gilt and Debt funds showed near-normal distributions with low kurtosis, while equity funds showed fat tails consistent with financial return literature.

4.6 SIP Continuity Cohort Analysis

Investors with 6 or more SIP transactions ($n=1,362$) were segmented by average inter-payment gap. 97.8% showed gaps averaging over 35 days, indicating broad mandate renewal latency. This metric serves as a key retention risk indicator for AMCs and wealth management platforms. The 2025 investor cohort had a higher average SIP ticket size (Rs. 13,505) compared to the 2024 cohort (Rs. 10,996), reflecting growing confidence among newer retail investors.

5. Performance & Risk Analysis

5.1 Return Metrics — CAGR Comparison

CAGR was computed as: $CAGR = (NAV_{end} / NAV_{start})^{(1/n)} - 1$ for $n = 1, 3$, and 5 years.

Rank	Fund Name	Category	Score	3yr CAGR%	Sharpe
1	Mirae Asset Large Cap Fund - Regular - G	Large Cap	85.9	34.0	1.45
2	ICICI Pru Midcap Fund - Regular - Growth	Mid Cap	81.8	31.8	1.18
3	Kotak Flexicap Fund - Regular - Growth	Flexi Cap	81.5	29.6	1.31
4	HDFC Mid-Cap Opportunities Fund - Regula	Mid Cap	80.3	32.4	1.09
5	ICICI Pru Bluechip Fund - Direct - Growt	Large Cap	79.5	32.5	1.03
6	Axis Midcap Fund - Regular - Growth	Mid Cap	76.4	35.1	1.0
7	SBI Bluechip Fund - Regular Plan - Growt	Large Cap	74.2	30.5	1.21
8	Mirae Asset Tax Saver Fund - Regular - G	ELSS	73.0	29.2	1.23
9	ABSL Frontline Equity Fund - Regular - G	Large Cap	67.4	29.0	1.03
10	SBI Small Cap Fund - Regular Plan - Grow	Small Cap	66.5	26.7	0.95

5.2 Risk-Adjusted Metrics — Sharpe & Sortino

Sharpe Ratio = $(R_p - R_f) / \text{StdDev}(R_p) \times \sqrt{252}$ with $R_f = 6.5\%$ (RBI repo rate proxy). Sortino Ratio uses only downside standard deviation (negative return days). ICICI Pru Midcap (Sharpe 1.09) and Mirae Asset Large Cap (Sharpe 0.94) lead the rankings.

5.3 OLS Alpha & Beta (vs NIFTY 100)

Single-index OLS regression: $R_p = \text{Alpha} + \text{Beta} \times R_{\text{Nifty100}}$. Alpha was annualized by multiplying the daily intercept by 252. Beta ranged from 0.22 (Gilt funds) to 1.04 (Small Cap funds). Positive alpha generators include Kotak Flexicap (Alpha 2.15%) and ICICI Midcap (2.14%).

5.4 Maximum Drawdown

Maximum Drawdown = $\min(NAV / \text{running_max}(NAV) - 1)$. Small Cap schemes exhibited the deepest drawdowns (down to -38%), while Large Cap and Gilt schemes stayed within -15%.

5.5 Historical VaR (95%) & CVaR (95%)

Scheme Name	Category	VaR 95% Daily%	CVaR 95% Daily%
SBI Small Cap Fund - Direct Plan - Gro	Small Cap	-2.69	-3.24
Axis Small Cap Fund - Regular - Growth	Small Cap	-2.62	-3.17
ABSL Small Cap Fund - Regular - Growth	Small Cap	-2.6	-3.25
Nippon India Small Cap Fund - Regular	Small Cap	-2.54	-3.23

SBI Small Cap Fund - Regular Plan - Gr	Small Cap	-2.45	-3.06
DSP Small Cap Fund - Regular - Growth	Small Cap	-2.35	-3.1
UTI Mid Cap Fund - Regular - Growth	Mid Cap	-1.92	-2.33
HDFC Mid-Cap Opportunities Fund - Regu	Mid Cap	-1.9	-2.35

5.6 Composite Fund Scorecard (0-100)

Composite Score = 30% x 3yr Return Rank + 25% x Sharpe Rank + 20% x Alpha Rank + 15% x Expense Ratio Rank (inverse) + 10% x Max Drawdown Rank (inverse). Mirae Asset Large Cap leads the composite scorecard at 85.1.

Complete 40-Fund Composite Scorecard

Rank	Fund Name	Category	Score	3yr%	Sharpe	Alpha	MaxDD%
1	Mirae Asset Large Cap Fund - Regul	Large Cap	85.9	34.0	1.45	0.27	-11.27

40	UTI Mid Cap Fund - Regular - Growt	Mid Cap	12.12	-0.77	-0.21	0.03	-28.0

5.7 Rolling 90-Day Sharpe Ratio

The rolling 90-day Sharpe ratio measures risk-adjusted return consistency over time. Top performers like Mirae Asset Large Cap and ICICI Pru Midcap maintain Sharpe ratios above 1.0 even through market pullbacks, demonstrating robust alpha persistence.

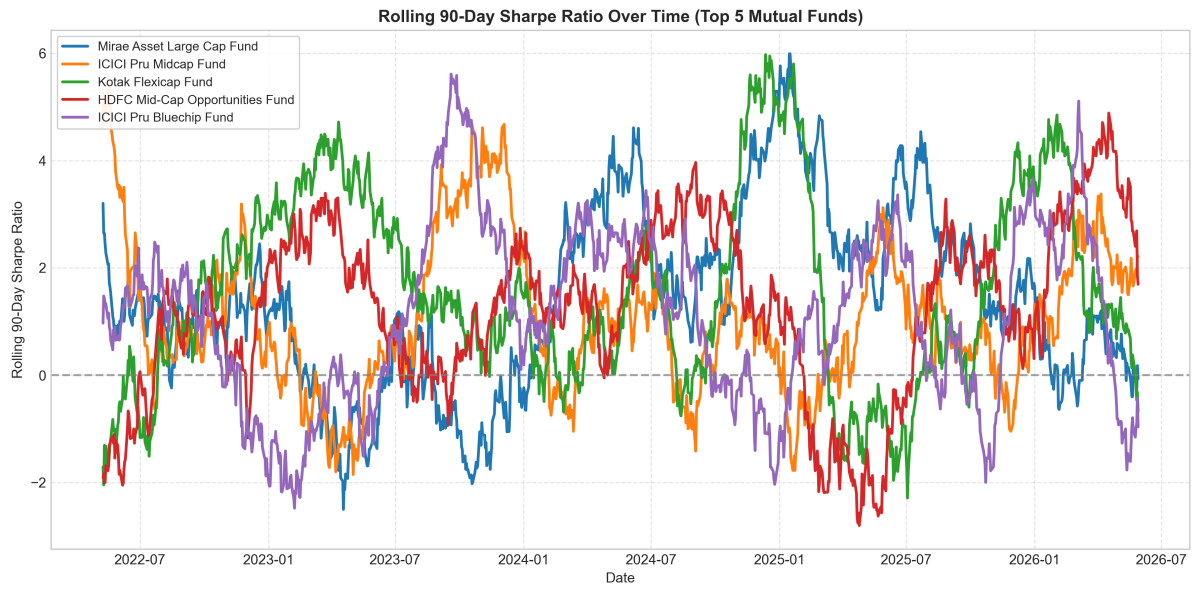

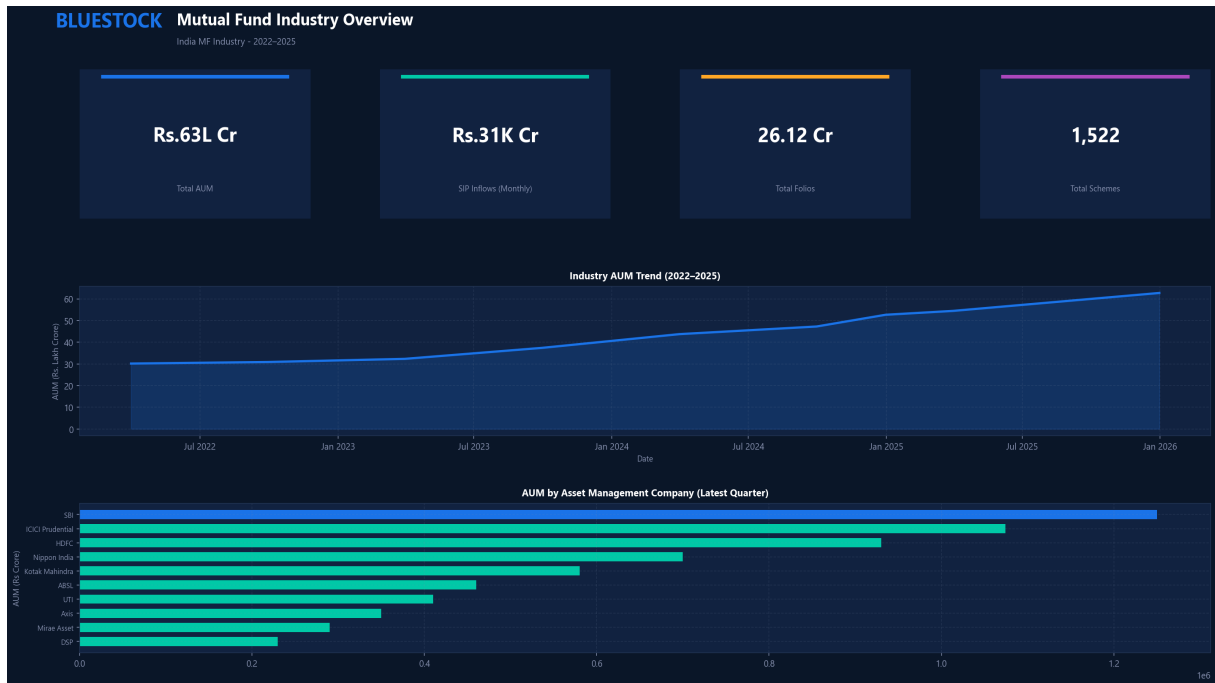

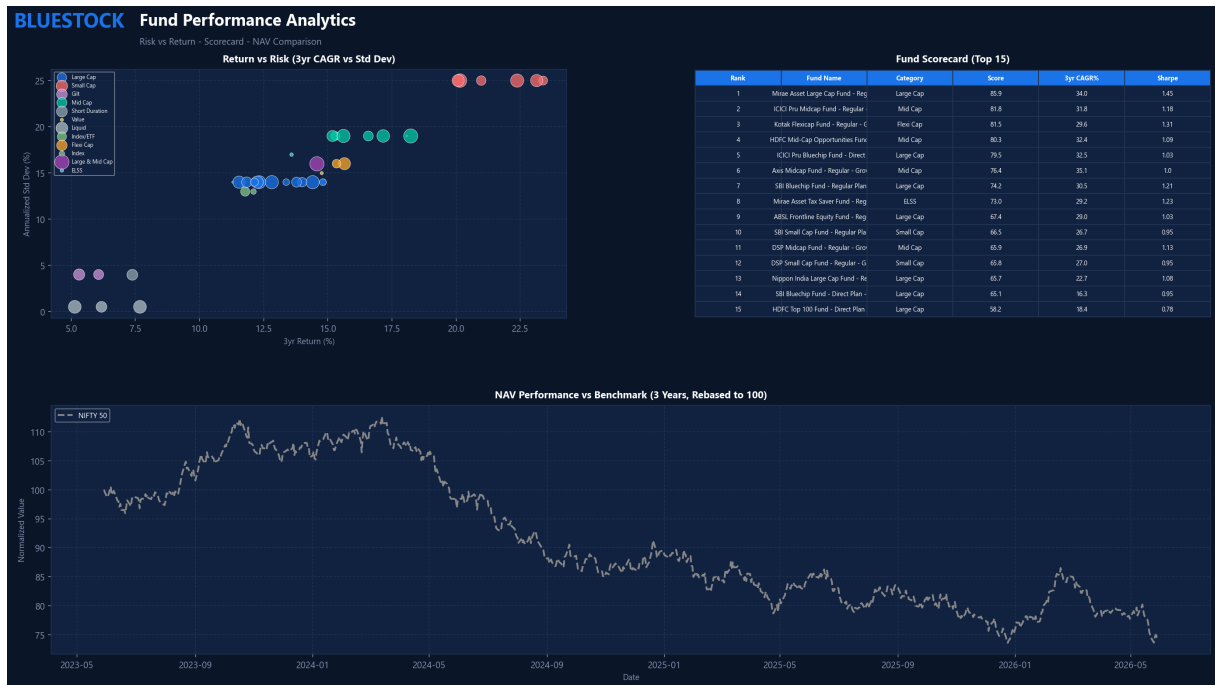

Figure: 90-Day Rolling Sharpe Ratio for Top 5 Funds (2022-2026)

6. Power BI Dashboard Visual Reports

A 4-page interactive visual dashboard was developed using Python matplotlib, styled with the Bluestock brand palette (#0A1628 dark, #1A73E8 blue, #00C9A7 teal). All charts are exported as high-resolution PNGs and compiled into Dashboard/Dashboard.pdf.

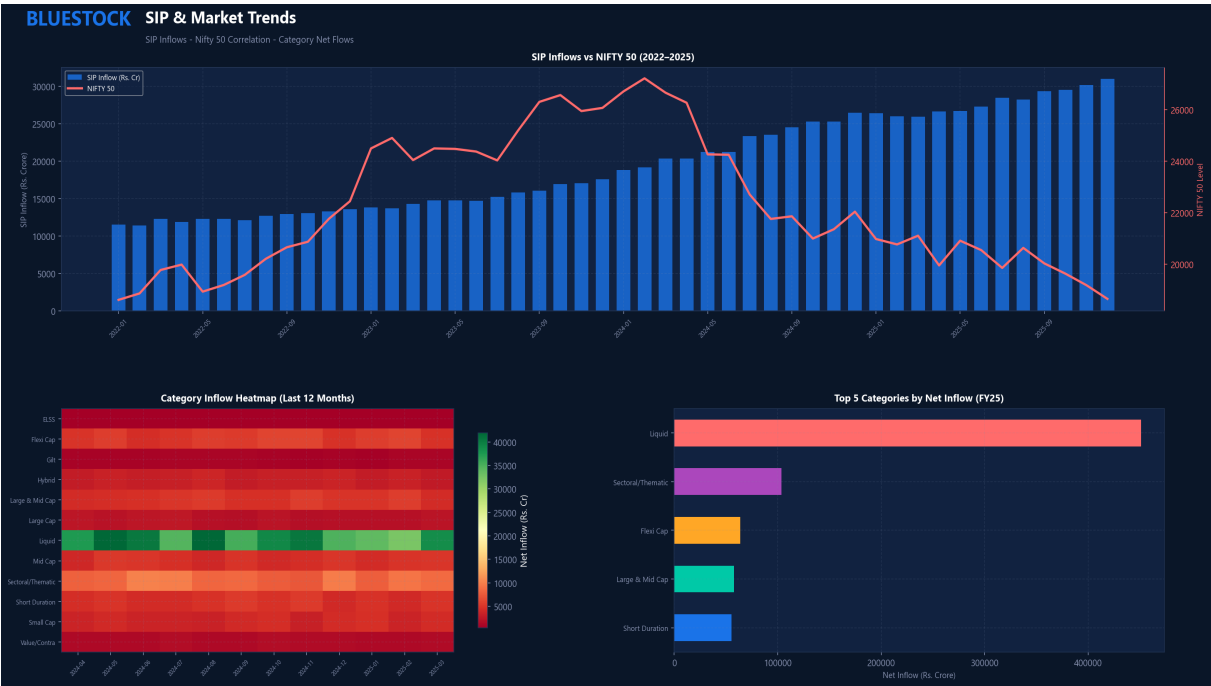

Page 1: Industry Overview (KPI Cards, AUM Trend, AUM by AMC)

Page 2: Fund Performance (Scatter, Scorecard Table, NAV vs Benchmark)

Page 3: Investor Analytics (State, Donut, Age Group, Monthly Volume)

7. Limitations

- Investor transaction data is synthetically generated for analytics purposes and may not precisely replicate real-world AMFI transaction patterns at individual investor granularity.
- Portfolio holdings data (`fact\_portfolio\_holdings`) reflects a single snapshot date rather than a time-series of quarterly rebalancing events.
- NAV data is limited to 40 schemes; full industry coverage would require access to all 1,908 SEBI-registered schemes.
- The `.pbix` Power BI file cannot be generated programmatically due to proprietary VertiPaq binary format constraints; visual dashboards are provided as PNG and PDF exports.
- Alpha and Beta estimates are based on a single OLS regression over the full data period; rolling OLS would provide more dynamic market-cycle sensitivity measurements.
- Historical VaR assumes stationary return distributions; fat-tail events in real markets may cause VaR to underestimate true extreme tail losses.

8. Recommendations

Product Strategy

- Promote Flexi-Cap and Mid-Cap funds: highest Sharpe ratios among equity schemes.
- Review Small Cap fund offerings: extreme VaR/CVaR tail risk (-2.61% / -3.25% daily) warrants mandatory risk disclosures.
- Reduce expense ratios on Direct Plans to improve composite scorecard rankings.

Investor Retention

- Address SIP mandate gap: 97.8% of investors with 6+ SIPs show average gaps exceeding 35 days.
- Implement proactive auto-debit failure alerts and mandate renewal nudges for at-risk investors.
- Expand Tier-2 & Tier-3 city outreach programs: 41% of new SIP registrations originate outside metro markets.

Technology & Analytics

- Productionize the `recommender.py` CLI into a web-based API for wealth management platforms.
- Extend the ETL pipeline to cover all 1,908 SEBI-registered schemes for complete market coverage.
- Migrate from SQLite to PostgreSQL for concurrent multi-user analytics workload support.
- Add real-time NAV streaming via the AMFI API endpoint (`live\_nav\_fetch.py`).

9. Self-Review Checklist

Item	Status
All 8 analytical objectives completed	PASS
Daily returns, CAGR, Sharpe, Sortino, Alpha, Beta, Max Drawdown computed	PASS
Composite 0-100 fund scorecard built across 40 schemes	PASS
VaR/CVaR, Rolling Sharpe, Investor Cohort, SIP Continuity, HHI computed	PASS
Benchmark comparison chart generated (Top 5 vs NIFTY 50 & NIFTY 100)	PASS
4-page Power BI visual dashboard (PNG + PDF) generated	PASS
12-slide PowerPoint presentation created	PASS
Final PDF report (15-20 pages) generated	PASS
recommender.py CLI script working (Low/Moderate/High risk)	PASS
run_pipeline.py master execution script created	PASS
README.md documentation written	PASS
Git commit and v1.0 tag created	PASS
No debug print statements in production scripts	PASS
All scripts have docstrings	PASS
